

Attention KIDMED Providers
ClaimCheck Impact to Billing of Preventive Screening and Office Visit

With the implementation of ClaimCheck on DATE OF PROCESSING MAY 17, 2010, a change is being made that may directly impact you. In circumstances where a child has a KIDMED screening, a suspected condition is identified, and the child must be referred in-house for a 'sick' visit on the same date of service, the 'sick' visit procedure code 99211 or 99212 MUST be accompanied by the 25 modifier. Following ClaimCheck implementation, absence of the 25 modifier will cause your claim to deny. Please take the necessary steps within your system or procedures to ensure that the 25 modifier can be appropriately placed on these claims.
