1.0 Introduction

This companion guide is published and made available for Submitters who wish to participate in the Louisiana Batch MEVS Program sponsored by Louisiana Department of Health (DHH) and Hospitals. DHH will utilize HIPAA standard transaction sets to facilitate the exchange of eligibility verification information with Submitters.

This guide describes the billing, usage, and technical aspects of the data exchange processes, including formats, time frames, security, and technical contacts.

Please note these abbreviations used in this document:

DHH = Louisiana Department of Health and Hospitals
HIPAA = Health Insurance Portability and Accountability Act
LMMIS = Louisiana Medicaid Management Information System
MEVS = Unisys Medicaid Eligibility Verification System
TCS = Transaction Code Set

Definitions

Submitter (Information Requester) – The entity responsible for uploading batch eligibility requests on the secured LMMIS Provider web-site. This may be the Medicaid Provider or a Clearinghouse.

Page 1 05/14/2009

2.0 Billing Information

Submitter Charges for using the Unisys Batch 270/271 Application

Submitters are not required to utilize the Unisys Batch 270/271 application; their participation/usage is voluntary. If a submitter elects to use the application, Unisys will charge the submitter for the usage. This section describes the submitter charges established by Unisys, but they are subject to change with appropriate approval of the Louisiana Department of Health and Hospitals and proper advanced notification to the participating submitter.

For the purpose of this discussion, a <u>discrete eligibility request</u> is defined as a Subscriber loop (Recipient Information) in a batch 270 file.

There is no limit to the number of files that a submitter may submit to Unisys.

Submitters who choose to participate in the Batch 270 program will be charged at rates based on the following pricing structure:

- Flat fee of \$50 per file for all files submitted to Unisys (for up to 500 records in the file)
- In addition, a fee of \$0.15 for each discrete eligibility request over 500 for any given file submission

As an example, if a submitter uploads a batch 270 file containing 650 discrete eligibility requests, the following equation will be used to decide the final charge:

Price = \$50 + (N * \$0.15) where N is the count of discrete eligibility requests over 500

Price = \$50 + (150 * \$0.15) = \$50 + (\$22.50) = \$72.50

Terminology

Recipient eligibility request - any 270 submitted to the MEVS server that results in a response other than a default MEVS system response. Each Subscriber loop found in the original batch 270 file will result in exactly one Recipient eligibility response.

Default MEVS System Response - There are situations where Unisys will not be able to process transactions. In those situations, a default response will be returned to the submitter. The format of this response is as follows:

ERRORMMISnnnneeeeee

Where nnnn is a four-digit message identifier that identifies the reason the claim was not processed; eeeeeee is a seven-digit sequence number that identifies the transaction within the Unisys systems. There are nine spaces after the sequence number.

The message identifiers currently in use are:

- MEVS An error occurred while processing a MEVS transaction
- 0001 Application is not currently active
- 0002 Application is not currently active
- 0003 Application is not currently active
- 0004 Network ID in envelope is not correct
- 0005 Unable to respond within required time limits
- 0006 Application is not authorized
- 0010 Cannot determine the appropriate application
- 0011 Default response not defined for this application.

Because none of these message identifiers are the result of a faulty transaction submitted by the submitter, submitters will not be charged in this case. Requests that fail because of a default system error will remain in the processing queue until the reason for the error is determined and addressed. At that time, all transactions that

Page 2 05/14/2009

failed due to the default system response error will be resubmitted and charges will be applied upon successful completion of the transaction.

Please note that any requests that fail due to a non-default MEVS system response (e.g. standard AAA segment errors in the 271 response) will still be charged at the rate(s) indicated above.

Minimizing Charges for Faulty 270 Transaction Submissions

The system will make an attempt to minimize costs to submitters by discontinuing processing on 270 transactions that have bad data in any of the segments other than the Subscriber loop segments (see TCS definition). The "non-subscriber" related information (e.g. Information Receiver [Provider Information]) appears in the batch 270 only once and therefore affects **every recipient request in the batch**. If the Provider Information is faulty and fails on the first MEVS submission attempt, processing will be terminated, and the submitter will be able to download the erroneous 271 for further interrogation. It is recommended that the invalid portions of the batch be corrected and resubmitted.

Monthly Billing Cycle

Unisys will generate monthly invoices and mail them to participating submitters who have used the application during the month. Unisys will utilize the submitter's billing (pay-to) address on our Medicaid provider enrollment files. If the submitter does not wish for Unisys to send invoices to that address, they should notify one of the support individuals indicated in Section 7 below.

Page 3 05/14/2009

3.0 Batch MEVS Transaction Data Sets Guidelines for Submitters

The DHH Batch MEVS application will utilize HIPAA standard transaction code sets (TCS) HIPAA ANSI X12N 270/271 Eligibility Benefit Inquiry and Response Code Set, Version 4010A1 to conduct data exchange with submitters.

ANSI ASC X12.281 - Eligibility, Coverage, or Benefit Inquiry (270)

The Health Care Coverage, Eligibility, and Benefit transactions are designed so that submitters can determine whether LMMIS has a particular recipient on file and, if so, the health care eligibility and/or benefit information about that recipient. Unisys will accept 270 submissions via the secured on-line Provider portal (www.lmmis.com). Unisys will also post 3 different response sets per 270 submission:

- TA1 To report the status of processing a received interchange header and trailer
- 997 To report transaction set specific verification results
- 271 To report eligibility request results including benefit information

<u>TA1</u>

Processing to generate a TA1 Interchange Acknowledgment file will begin as soon as the Batch 270 file is received. The TA1 Interchange Acknowledgment response file will be posted and made available to the submitter based on the order in which Batch 270 files are received. The online Transaction List will be updated when the TA1 file is posted.

<u>997</u>

Processing to generate a 997 Functional Acknowledgment will commence upon successful completion of validation of the Interchange Control envelope. The 997 Functional Acknowledgment file will be posted and made available to the submitter after processing of the Batch 270 file. The online Transaction List is updated when the 997 Functional Acknowledgment file is posted. *For more information, see the Submitter 270 Submission Notes.*

ANSI ASC X12.282 - Eligibility, Coverage, or Benefit Information (271)

A Batch 271 Eligibility response file will be created upon successful completion of both the TA1 Interchange Acknowledgment processing and 997 Functional Acknowledgment processing without critical errors. The Batch 271 Eligibility response file will report the eligibility status of each recipient eligibility request in the corresponding batch 270 file. The Batch 271 Eligibility Response file will be posted and made available to the submitter upon completion of eligibility verification processing.

<u>Delimiters</u>

The following delimiters are globally used in the implementation of this specification:

CHARACTER	NAME	DELIMITER
*	Asterisk	Data Element Separator
~	Tilde	Segment Terminator
%	Percent	Component Separator

Page 4 05/14/2009

ELIGIBILITY BATCH REQUEST ORGANIZATION

                                            Eligibility or Benefit Information
                                    HL - (19) - Subscriber Loop 2000C
                                            Eligibility or Benefit Information
                              HL - (20) - Information Receiver Loop 2000B
                                    HL - (21) - Subscriber Loop 2000C
                                            Eligibility or Benefit Information
                                    HL - (22) - Subscriber Loop 2000C
                                            Eligibility or Benefit Information
                                    HL - (23) - Subscriber Loop 2000C
                                            Eligibility or Benefit Information
                                    HL - (N) - Subscriber Loop 2000C
                                            Eligibility or Benefit Information
            SE - Transaction Set Trailer
      GE - Functional Group Trailer
IEA - Interchange Control Trailer
```

Each eligibility batch submission must contain only one of each of the following:

- ISA Interchange Control Header
- IEA Interchange Control Trailer
- GS Functional Group Header
- GE Functional Group Trailer
- ST Transaction Set Header
- SE Transaction Set Trailer
- HL Information Source Loop

The HL for the Subscriber Loop may be repeated as many times as needed to request eligibility information about subscribers. The Hierarchical ID in HL01 must be unique for each HL segment in the Transaction Set. Each subsequent Hierarchical ID should be incremented by 1. (See the illustration above).

Each segment in the batch structure must be terminated with a tilde (~).

Please avoid using Carriage Control and Line Feed (CR/LF) sequence in the construction of the eligibility batch file.

Page 5 05/14/2009

3.1 HIPAA Transaction Code Sets (TCS)

Unisys will utilize the following HIPAA Code sets with the Batch MEVS application:

- Envelope for 270 and 271 batches
- 270 Batch Eligibility Request
- 271 Batch Eligibility Response
- 997 Transaction Set Specific Validation
- TA1 Interchange Acknowledgement

The following tables describe the format of the files that will be used for communication between the Batch MEVS system and submitters. All formats are based on HIPAA X12N Version 4010A1 Implementation Guides.

Page 6 05/14/2009

3.2 HIPAA TCS Envelope Definition for 270 and 271 batches

<u>Loop</u>	<u>Segment</u>	<u>Field</u>	Description (Element	Element Definition/Length	Valid Values	<u>Notes</u>
N/A	ISA	ISA01	Name) Authorization Information Qualifier	Code to identify the type of information in the Authorization Information Element/ 2 characters	00 – No authorization information present	
	ISA	ISA02	Authorization Information	Information used for additional identification or authorization of the interchange sender or the data in the interchange/ 10 characters	Spaces or Zeros	
	ISA	ISA03	Security Information Qualifier	Code to identify the type of information in the Security Information/ 2 characters	00 – No security information present	
	ISA	ISA04	Security Information	This field is used for identifying the security information about the interchange sender and the data in the interchange; the type of information is set by the Security Information Qualifier/ 10 characters	Spaces or Zeros	
	ISA	ISA05	Interchange Id Qualifier	Qualifier to designate the system/method of code structure used to designate the sender or receiver Id element being qualified/ 2 characters	'ZZ' – Mutually Defined	
	ISA	ISA06	Interchange Sender Id	Identification code published by the sender or other parties to use as the receiver Id to route data to them; the sender always codes this value in the sender Id element/ 15 characters	Please use your company's Federal Tax ID	Put spaces following Federal Tax ID to fulfill 15 characters.
	ISA	ISA07	Interchange Id Qualifier	Qualifier to designate the system/method of code structure used to designate the sender or receiver Id element being qualified/ 2 characters	ZZ – Mutually Defined	
	ISA	ISA08	Interchange Receiver Id	Identification code published by the receiver of the data; when sending, it is used by the sender as their sending Id, thus other parties sending to them will use this as a receiving Id to route data to them/ 15 characters	610551	Put 9 spaces following Receiver Id to fulfill 15 characters.
	ISA	ISA09	Interchange Date	Date of the interchange/ 6 characters		YYMMDD format
	ISA	ISA10	Interchange Time	Time or the interchange/ 4 characters		HHMM format
	ISA	ISA11	Interchange Control Standards Identifier	Code to identify the agency responsible for the control standard used by the message that is enclosed by the interchange header and trailer/ 1 character	U	U.S. EDI Community of ASC X12, TDCC, and UCS

3.3 HIPAA X12N 270 (4010A1), Batch MEVS 270 Transaction Map

Batch 270 Transaction Sets will follow the same convention, structure, and data element definitions as those outlined in the LA MEVS Vendor specification (MEVS Vendor Specification) with one exception. This exception provides for a batch 270, where there can be multiple subscriber (recipient) loops per ST segment. The entire LA MEVS Vendor specification transaction map has been reproduced here for convenience. The exception, as noted previously, is marked in red.

Per the transmission guide: Segments shown in bold type are required. Fields shown in bold are required if that segment is used. Modifications to the standard MEVS Vendor Specification in red.

3.5 HIPAA X12N 997 (4010A1), Batch MEVS EDI Controls Transaction Map (997 ACK)

The EDI Control Transaction Set consists of:

- ISA Interchange Control Header Segment
- **IEA** Interchange Control Trailer Segment
- GS Functional Group Header Segment
- **GE** Functional Group Trailer Segment
- TA1 Interchange Acknowledgment Segment
- **FA** Functional Acknowledgment Set (997)

There will be two response files posted in response to the reception of a Batch 270 submission:

- TA1 Interchange Acknowledgment File
- 997 Functional Acknowledgment File

The TA1 - Interchange Acknowledgment response file acknowledges the reception of an X12 Interchange Control Header and Trailer (ISA / IEA). The status of the submission is specified in the TA1 segment in the TA1 response file. The TA1 response file will be the first response to reception of a 270 batch submission. This file will contain only an ISA, a TA1, and an IEA records.

The 997 Functional Acknowledgment will be produced if there are no errors presented in the TA1 Interchange Acknowledgment file. The 997 Functional Acknowledgment will provide status and details about the Functional Group and Trailer (GS / GE) and the Transaction Set (ST / SE). Acceptance or rejection of the Functional Group or Transaction Set is provided. Data elements in error will be identified along with the error code for each error detected in the submission. This file will contain the ISA, GS, ST, SE, GE, IEA envelopes as well as the 997 Functional Group response segments (AK1, AK2, AK3, AK4, AK5, AK9).

Unisys will store and process the batch 270 submission. The submission will then be processed to validate the file structure. The results of this validity check will be reported in the TA1 and the 997 files posted for the submitter. If the 270 submission structure is valid, the file will then be processed to produce a batch 271 response file. This file will be posted for the submitter no later than the next business day.

Unisys will NOT request an acknowledgment transmittal from each submitter for transmissions in the 271 format from DHH to each submitter.

Per the transmission guide:

Seaments shown in bold type are required.

Fields shown in bold are required if that segment is used.

4.0 270 Submission Guide

1. Login to the www.lmmis.com secured on-line Provider portal:

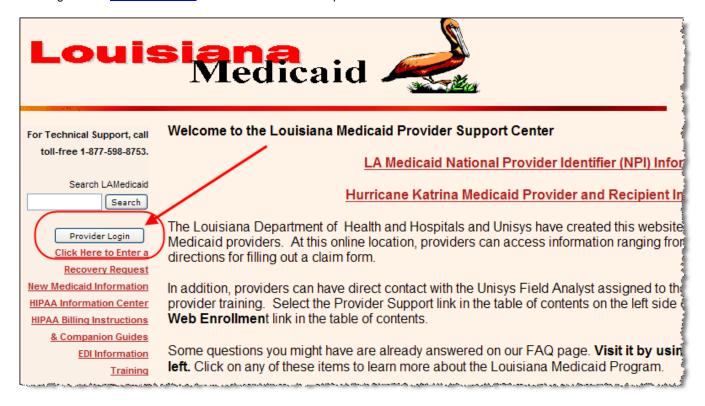

Figure 1 - Home Screen

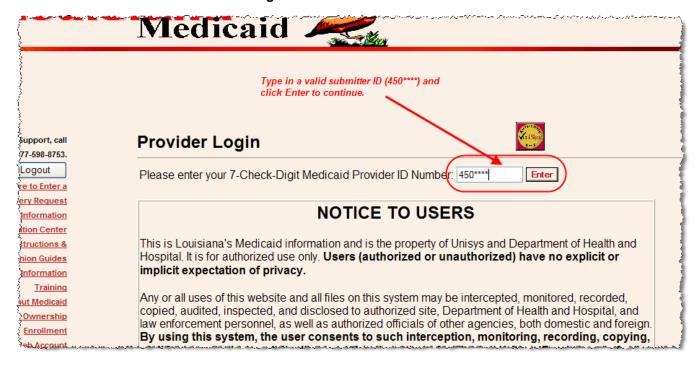

Figure 2 - Submitter Login

Page 27 05/14/2009

Figure 3 - Submitter User Login

2. On the Provider Applications screen, click on the Batch 270 Submissions link:

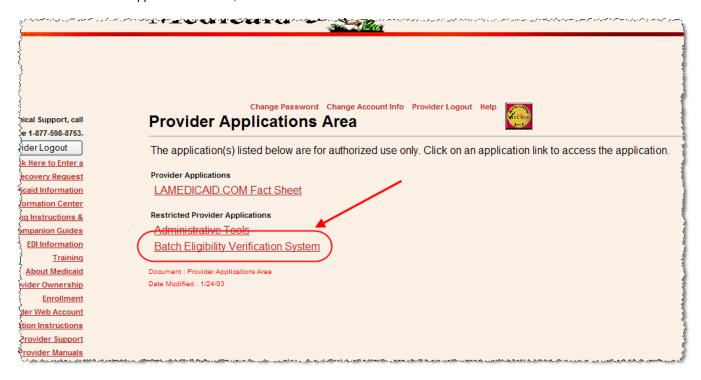

Figure 4 - Submitter Applications Screen

3. You will be directed to the new Batch 270 application:

Page 28 05/14/2009

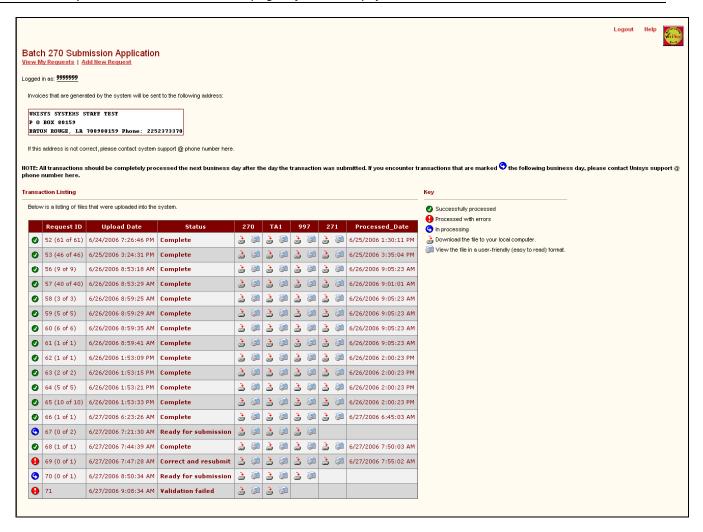

Figure 5 - Batch 270 Application Default Screen

4. To get started, click on the "Add New Request" link located at the top of the page. This will direct you to the file upload screen (see Figure 3).

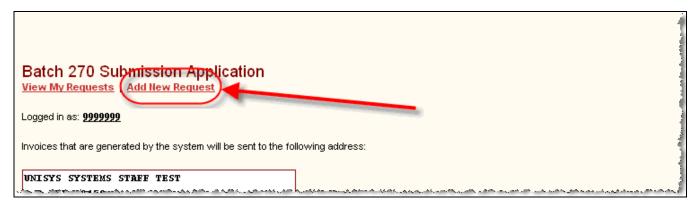

Figure 6 - Link to add a new request

Page 29 05/14/2009

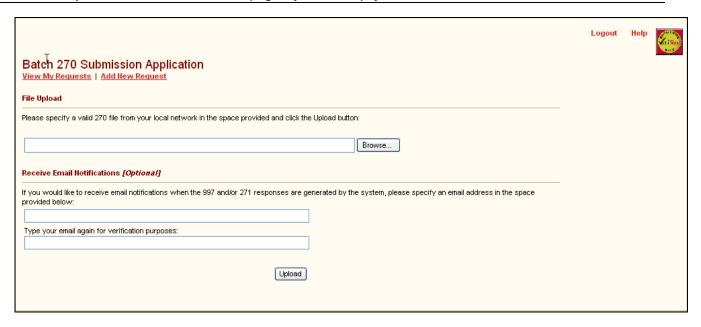

Figure 7 - File Upload Screen

5. Specify a valid 270 transaction file from your local computer or network. If you need help locating a file, use the Browse button next to the file name field.

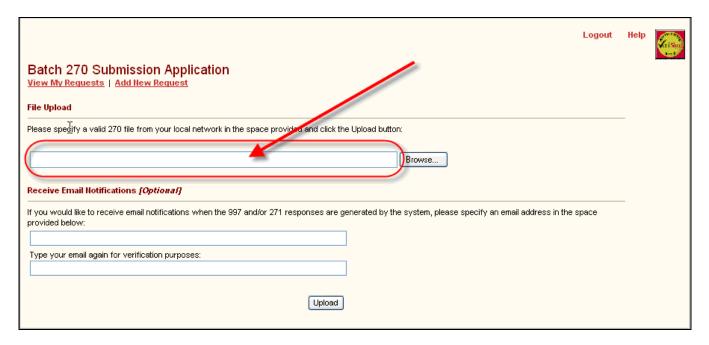

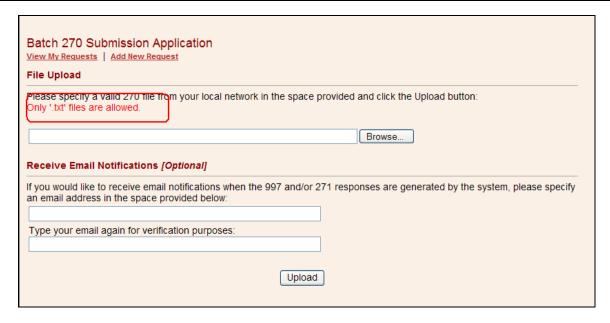

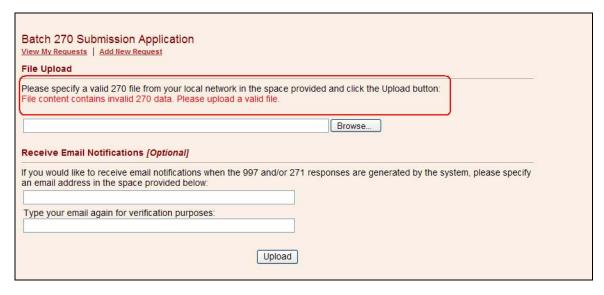

Figure 8 - Specifying a Valid 270 file

Only a valid 270 transaction file in text format, .TXT file type, is allowed to be uploaded into the system. Specifying any other file type, such as PDF, ZIP, etc., will not be allowed.

Page 30 05/14/2009

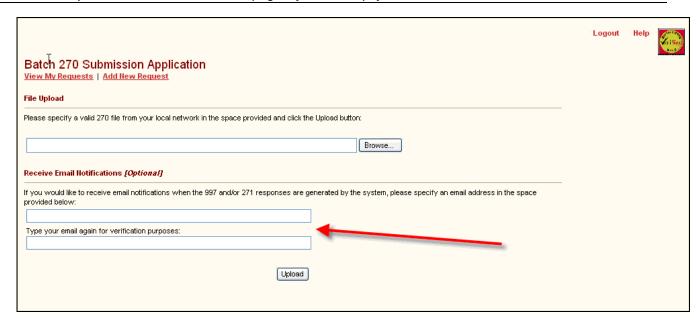

In addition to the .TXT file type validation, if you inadvertently upload the incorrect file, then the system will not allow the process to continue. This feature does not perform any 270 validation. The next step in the process will be the 270 validation. See Section 5 Submitter 270 Submission Notes.

6. **[Optional]** – If you would like to receive system notifications via email, you can enter an email address in the fields provided. You are required to enter your email address twice. This is done for verification purposes (to prevent typos).

Page 31 05/14/2009

7. Click the Upload button to upload the 270 file to the Unisys system:

Figure 9 - Upload button to submit transaction

8. You're done! If the file you specified was a valid 270 transaction as noted in this document, you should see a new entry appear in the "Transaction Listing" located near the bottom of the screen. If, for whatever reason, the upload process fails, there will be a description of the error (marked in red).

Page 32 05/14/2009

5.0 Submitter 270 Submission Notes

The following are important processing procedures and schedules to consider when submitting 270 eligibility request files:

Submission Processing

- With each 270 file that is uploaded to the system, the following processes will occur:
 - **Step 1)** TA1 and 997 validation Validation of the Interchange envelope will be posted in the TA1 file. Validation of the Functional Group will be posted in the 997 file.
 - **Step 2)** Valid 270 files placed in processing queue Files that pass both TA1 and 997 level validations will be submitted for eligibility request processing.
 - **Step 3)** The Transaction Listing (see Figure 5) will be updated The transaction listing will be refreshed and details about the submission will appear at the bottom of the list. Details will be posted of the available TA1 and 997 files. A 271 batch response file will be produced for a valid 270 file submission. When processing of the batch is completed the details will be posted to the Transaction Listing.

Business Day Processing

- Each business day the Eligibility Verification System will run the following processes:
 - Each valid Batch 270 submission will be processed to produce a Batch 271 response file.
 Responses to all submitted transactions will be made available by the next business day.
 - File posted to secured on-line Provider Portal All batch 271 files created are stored in a secured Provider Portal access area where they will be available for immediate download by the submitter.

System Notifications

When uploading a file, users have the option of specifying an email address. By specifying an email address in the field provided, the user is indicating that they are interested in receiving system notifications as they occur. Below is a list of system events that generate email notifications:

- TA1 file is created and available for download
- 997 file is created and available for download
- 271 response is created and available for download

Page 33 05/14/2009

6.0 File Naming Conventions

We recommend the following naming convention be used by the submitter for their file submissions to maintain file organization and to facilitate communication with Unisys, if necessary:

Below is an example of one naming convention that might be employed:

Pnnnnnn-B270-yyyymmdd-sss.txt

where **nnnnnn** = your 7-digit Louisiana Medicaid Provider ID number, **yyyymmdd** is the year, month, and day of the submission, and **sss** = a 3-digit sequence number for the batches sent on that date.

There is no limit to the number of files that a submitter may to submit to Unisys.

Page 34 05/14/2009

7.0 Submission Security

The on-line Louisiana Medicaid Provider Portal (www.lmmis.com) uses Verisign and SSL (secure-sockets layer) technologies to secure and encrypt all data transmissions between the Submitter Community and Unisys Corporation. Submitters who wish to use the Unisys batch 270/271 application will need to be currently enrolled in Louisiana Medicaid with a valid Louisiana Medicaid Submitter ID number, and they will need to register with the Unisys Louisiana Medicaid web site (provider portal at www.lmmis.com). The web site contains instructions about how to register.
