

UPDATE REGARDING CHANGES TO THE ELECTRONIC CLAIMS STATUS INQUIRY (eCSI) WEB APPLICATION

The previously announced changes to the eCSI web application were not implemented on October 17, 2011. DHH has delayed the implementation to allow users time to adjust to the discontinuance of returning certain data that is currently being reported—Medical Record Number, Payment Method, Recipient date of birth and gender. These changes are mandated for HIPAA 5010 transaction compliance. Therefore, providers will need to adjust their use of the application with these required changes in mind. The new implementation effective date and updated user manual will be announced in the future.
